

Non-Sterile **Phase 4 Gel™ Splint**

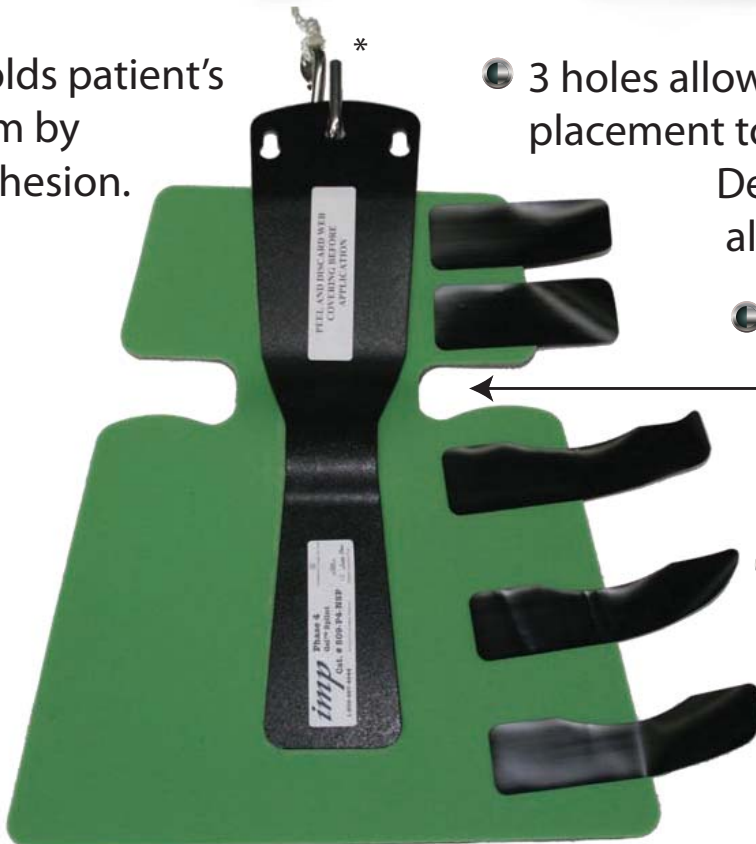

A UNIQUE FOREARM TRACTION SPLINT FOR SHOULDER ARTHROSCOPY

- Phase 4 Gel™ Splint distributes pressure and shear forces over a large area.

Courtesy of Alan Reznik, M.D. New Haven CT

- Holds patient's arm by adhesion.

- 3 holes allow for different hook placement to control rotation.

Designed to be used with all traction shoulder positioners.

- Pre-formed plastic backbone gives conformity to the forearm/wrist anatomic angle.
- Loop and Hook closures hold splint on the patient's arm and provides versatility.
- Universal sizing reduces inventory.

PATENT APPLIED FOR

Non-Sterile **Phase 4 Gel™ Splint**

- Universal sizing reduces inventory.

- Can be trimmed for sizing.

- Low profile reduces space for storage.

- Designed to be used with all traction shoulder positioners.

- Compare to other devices that rely strictly on compression of the arm, wrist/hand or fingers.
