

Innovative Medical Products on threshold of new era of growth that will offer customers and patients enhanced benefits

PLAINVILLE, Conn. (November 15, 2018) -- Thanks to the acceptance of doctors, nurses, hospitals and surgical centers, Innovative Medical Products has been experiencing a period of sustained growth with the recent expansion of its engineering facilities and the addition of the latest high-tech machinery to improve IMP's product development, production and quality control.

"Innovative Medical Products has had steady growth since its inception 35 years ago, and continuing that pattern, we are having our best year ever," notes IMP Vice President Earl Cole.

According to Cole, IMP's recent technology investments not only affirm IMP's solid commitment to manufacturing and engineering but also help manage IMP's success by staying ahead of the growth curve. The company's vice president points out that IMP's manufacturing facility in Plainville, Connecticut, is already outfitted to add more equipment as needed.

Yet for all of its expertise in engineering and manufacturing, Cole reminds everyone that IMP is a medical innovation company that has invented positioning solutions which have become the gold standard in their respective surgical specialties. "We are a strong, vibrant company," notes Cole, "because we have produced innovative products that effectively serve a very important medical niche and we are dominant players in that market.

"Since our beginning in 1984, IMP has pioneered many advances in orthopedic and surgical positioning and has become a world leader in patient positioning devices. This ability to seize opportunities, chart new courses and whole-heartedly commit our resources to serving our customers' needs are the secret of our success and continuous growth."

Customers:
